* Coverage not guaranteed, may require a self install outdoor antenna for \$55.
Information valid on 7th May, 2009, and subject to change in the future.

Wireless Broadband Extra Details

General Information:

Our Wireless Broadband uses the Optus Mobile Phone network to provide a fast Internet service to your home, business or farm. (And you can take it with you on holiday!)

Coverage is important for Wireless Broadband to work, and using a \$55 outdoor antenna I have been able to get some properties up and running with three bars of coverage 25-32KM out of Guyra and 15KM out of Armidale using a yagi antenna.

If you can get an Optus mobile signal where you want to use this service, you may not need any antenna at all.

Exetel have ordered a bulk shipment of these antenna from China at 1/3rd the cost of those currently in the market; and will be arriving here late June / Early July selling for \$55.

If the cost of the modem is an issue, there are a few other plan options that allow you to pay off the modem over two years via slightly higher usage charges.

Local Support and Installation.

I offer local support to Guyra, Armidale, Glen Innes, etc. For other people I offer over the phone support and Remote Assistance via a tool on my website.

Share with more computers...

If you want to be able to share the Internet with other computers, you can either use the Windows' Internet Sharing feature on a computer; or you can purchase a \$150 NetComm Wireless Broadband to WiFi & Lan adapter.

Other Value-adding feaures?

VoIP: If you have good enough reception (three stable bars or more) you may be able to use VoIP as well. Call rates 10c untimed to any landline, 22c/min to mobile; but uses about 80MB per hour during a call. 100 Free Calls to Landlines included per month.

Send and receive faxes via email. (\$1 per month fee to have your own dedicated fax number.) 10 cents per fax. 20 Free faxes per month.

Send SMS messages from your computer for 8c each, with 30 free SMS per month. (Replies can go to your computer or to any mobile phone.)

Usage Meters are available so you can see how much you've used.

Coverage Maps: Available from <http://www2.optus.com.au/> - note that the Yagi antenna can extend coverage beyond this map to some degree. Some new base stations in our area!

What about my current email address? Get a Gmail address and never be trapped by having an ISP-based email address again, or pay your current ISP to keep your address.
